The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4-12, 15-20, are rejected under 35 U.S.C. 102(b) as being anticipated by US 6176807 (Oba et al).

Oba et al discloses a method of operating an internal combustion engine 1 comprising a motor/generator 3, a transmission 13, a controller 17 for sensing acceleration demand signals from an electronic throttle 23, said controller controlling the motor/generator by determining when to provide more power to support the engine in response to said acceleration demand signals.

Claims 1, 4-12, 15-20, are rejected under 35 U.S.C. 102(b) as being anticipated by US 5701062 (Barrett).

Barrett discloses a method of operating an internal combustion engine 1 comprising a motor/generator 42, a transmission, a controller 26 for sensing acceleration demand signals from an accelerator pedal 32, said controller controlling the motor/generator by determining when to provide more power to support the engine in response to said acceleration demand signals.

Claims 1, 4-12, 15-20, are rejected under 35 U.S.C. 102(b) as being anticipated by US 5865263 (Yamaguchi et al).

Yamaguchi et al discloses a method of operating an internal combustion engine 1 comprising a motor/generator 3, a transmission, a controller 424 for sensing acceleration demand signals from an accelerator pedal 411, said controller controlling the motor/generator by determining when to provide more power to support the engine in response to said acceleration demand signals.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-3, 8-9, 13-14, are rejected under 35 U.S.C. § 103(a) as being unpatentable over either one of the references applied above, Yamaguchi et al, Barrett, or Oba et al. Each reference above discloses all the claimed subject matter as set forth in the rejection of claim 1, but does not disclose the specific number of electric current, battery system. However, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to select the specific current or battery system in each of the references noted above for the purpose of achieving appropriate power output.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6336889, Hoshiya et al, disclose control system for an
